or without cord

The Only Plugs Designed To Not Back Out Of The Ear.

Earplugs that slip or back-out of the ears, lose their critical seal against noise. That's why E•A•Rsoft Grippers earplugs have a unique shape and patented *Grip Rings*. These ultra-soft earplugs are designed to "grip & hold" their position in the ear canals.

They stay, so the excellent protection stays – **an NRR of 31 dB**. *Easy-Grip Handles* make for easier insertion and removal, too.

The tight grip and the right fit. Specify NEW E•A•Rsoft Grippers earplugs. Available with or without cord

NEW E•A•Rsoft® Grippers™ Earplugs

**E•A•Rsoft Grippers.
Available Corded or Uncorded**

How to Order

E•A•Rsoft Grippers earplugs are available corded or uncorded. Dispenser boxes contain 200 pairs in polybags. 10 Dispensers per case.

Designed To Grip In, Not Back Out.

E•A•Rsoft Grippers are designed to solve the problem of earplugs backing out of wearer's ears during the day.

Here's How: After proper insertion, the rolled-down plug expands to fit the ear canal and the innovative Grip Rings softly "hold" onto the ear's interior to keep the plugs in place. The result? Extended comfort and a noise seal that remains consistent – even during "plug loosening" jaw movements such as talking and chewing.

Shaped For Easy Ins. "Handled" For Easy Outs.

The unique shape of E•A•Rsoft Grippers and the "fingertip push" concave at the base helps wearers achieve easy, deep insertions for optimum protection. The Easy-Grip Handles on the plugs allows for quick and easy removal of the plugs. Never before has one plug offered so many easy-to-use advantages.

Foam Is Formulated For Extra Softness.

E•A•Rsoft Grippers are made of a foam produced to feel ultra- comfortable in the ears, even during long wear periods. Plus, this added softness helps eliminate "pressure" within the ear canals, a common complaint with some other foam earplugs.

Excellent Protection That Remains Excellent – All Day Long.

E•A•Rsoft Grippers were tested in a NVLAP approved laboratory and proved that, when properly fit, they provide an NRR of 31dB. Better yet, since they are designed to keep the noise seal intact, the excellent protection level remains at its optimum, too.
